

# Bevilles Success Story

Migrating Bevilles Mission Critical Application into the future with jBASE

## About Bevilles Jewellers

Bevilles Jewellers is a retail business specialising in Jewellery and Watches with a proud history dating back to 1934. Bevilles has stores located throughout Victoria, New South Wales and South Australia. Bevilles is the brand of beautiful jewellery that inspires, builds confidence and enhances people's lives.

Bevilles ran their D3 MultiValue application in the Uniware Cloud with 100% uptime since the move back in 2011. Bevilles next aspiration was to set themselves up for future modernisation, wanting to ensure they had the capabilities of modernising their business systems.

## Challenges Faced by Bevilles

Their previous D3 MultiValue database wasn't flexible, didn't offer modernisation tools like Native RESTful services and they had a growing demand for a full data replication solution. Bevilles felt they lacked development advancements from their database provider while their maintenance costs continued to grow.

# Realising the Opportunities

Bevilles was looking for future modernisation with the most recent tools that would allow transportability between database solutions. After speaking to their software solution provider, Uniware, they realised they could achieve this with jBASE.

A modern platform that offers ease of use and has a small footprint, jBASE is a high performing database which connects to web services and API integration, simplifying web/application development.

The jBASE architecture integrates with a variety of application development tools and backend databases, so you can preserve decades of custom MultiValue programs but move forward with mainstream development. This allowed Uniware to convert the existing ERP application at Bevilles over to jBASE with minimal issues related to specific functionality provided by their previous D3 MultiValue database system.

Implementation of jBASE enabled data replication to provide a full Disaster Recovery (DR) solution in the unlikely event that their production system was to become unavailable. They also use the DR server for other functions such as reporting. Bevilles now has peace of mind knowing they have a full DR solution in place with the ongoing support of Uniware.

This highly flexible platform provides Bevilles the freedom to design their applications around their business needs, not the capabilities of their database and at reasonable price saving them future cost.

## Bevilles Today and Tomorrow

**Today:** Bevilles is currently enjoying the benefits of running their mission critical application on jBASE ready for when they take the next step towards modernisation. Bevilles will take full advantage of Native RESTful Services, which are built into jBASE allowing them to bypass proprietary APIs and open their Pick application to any language environment, web service or application.

**Tomorrow:** Bevilles will use the latest and most popular development tools to add a modern user interface to provide their employees and customers access to their application through the web and mobile devices. Uniware supported Bevilles during and post implementation of jBASE. Uniware continues to provide Bevilles with access to a consistent and reliable support team of dedicated developers.

## About Uniware

Uniware is an Australian company with forty years of specialised experience, providing the widest range of MultiValue Database Solutions in Australia and New Zealand. Delivering exceptional cloud and in premise MultiValue Database technology, services and resources.

Our commitment and dedication in providing exceptional technology solutions and services enables us to exceed our customers' expectations and enhance their business performance.
