

# MVCONNECT

## Integrate your MultiValue Application with Salesforce, NetSuite, and more with MV Connect

### MV Connect

Businesses rely on access to modern technologies, web and mobile applications, and cloud solutions. If you run a MultiValue database, you may think you are stuck in the past, but that is no longer the case. Now, you don't have to choose between the modern applications your users expect and the database on which you've built your business.

Whether you run UniData, UniVerse, D3, or OpenQM, you are now able use RESTful Web Services with MV Connect. RESTful Web Services give mainstream developers the familiar tools they need to rejuvenate your MultiValue application.

Create modern, browser-based user interfaces that are built on Web 2.0 frameworks, such as Angular JS. Integrate with popular SaaS-based applications like Salesforce™, Workday™ and NetSuite™. Connect your MultiValue application to RESTful Web Services with MV Connect and reinvent the way you connect to your MultiValue application.

### Key Benefits

- **Eliminate vendor lock-in**

Use mainstream Web 2.0 frameworks and technologies developed by innovators like Google and Facebook.

- **Ensure flexibility for the future**

Integrate your application with modern API interoperability with popular applications.

- **Reduce costs and risk**

Avoid the expense and risk that comes with the time-consuming process of replacing a MultiValue system.

- **Maximise stability**

Embrace your current application and maintain your customised business processes and software.

**Let us help you modernise and preserve your MultiValue investment!**
