

Evoke
capture your imagination

Rapidly Design Powerful Business Apps

Rapid Application Development to a structured Visual Studio project.

Evoke has all you need to rapidly develop and deliver mobile and web apps, to run on all platforms and devices (iPad, iPhone, Android etc. plus Windows, Linux and Apple desktop). You can build business apps, and extend enterprise applications, for your customers, employees and partners in a fraction of the time and cost of regular methods.

You can quickly build your user interfaces, define and manage your data, and employ Evoke guidance and business logic to create your app. Data can be fully integrated with back-end systems, providing immediate synchronisation of data between devices.

From the single Evoke code set, you can then elect to generate and deploy as web apps, or to generate industry standard Visual Studio and Xamarin projects to deploy as native apps or to form part of your onward development program. The powerful options and growth paths open to you are unlimited.

RESPOND TO TODAY'S CHALLENGES

- **Develop mobile and web apps, and extend Enterprise applications, quickly and effectively, for ALL the major mobile and desktop devices**
- **Integrate and synchronise with back end systems and databases**
- **Adapt to ever-changing business requirements and technologies**
- **Secure unlimited growth path potential and future proof against technological advances**
- **Utilise existing in-house personnel and skills**
- **Adopt current industry standards and products**
- **Dynamically change a single User Interface across platforms and devices**

Microsoft, Visual Studio and Xamarin are trademarks of the Microsoft group of companies

Instantly upgrade your existing personnel to create amazing, powerful multi platform apps that work with your products and data

Application Lifecycle Management: Evokes single code set encompasses the development, management and customisation process allowing you to easily design, release and customise to continuously maintain support for changing business requirements.

WYSIWYG: Support throughout the design and a multifunction adaptation process, so that you can dynamically design your screens for each device type with a single code base.

Native Device Features: Evoke's unique App Launcher provides all you need to manage the release of your web app to the users as well as supporting the inclusion of native device features such as Mobile Process Lifetime Management (PLM), soft keyboard and full screen usage.

Visual Studio and Xamarin: Evoke will automatically generate your designed app into structured Visual Studio and Xamarin projects to provide a seamless path to native solutions, customisation, onward development and unlimited growth. You are free from any possible proprietary lock in and you can future proof your systems!

Standardized Technologies are employed throughout, IDEs (Visual Studio, Xamarin), Languages (C#, JavaScript etc.), Deployment (IIS, ASP.Net etc.), Component Libraries (jQuery, ASP.NET, Knockout etc.)

Database Integration: Evoke delivers seamless integration with your SQL or MultiValue back-end database within an existing or new product solution.
