

AUSVANTAGE ERP

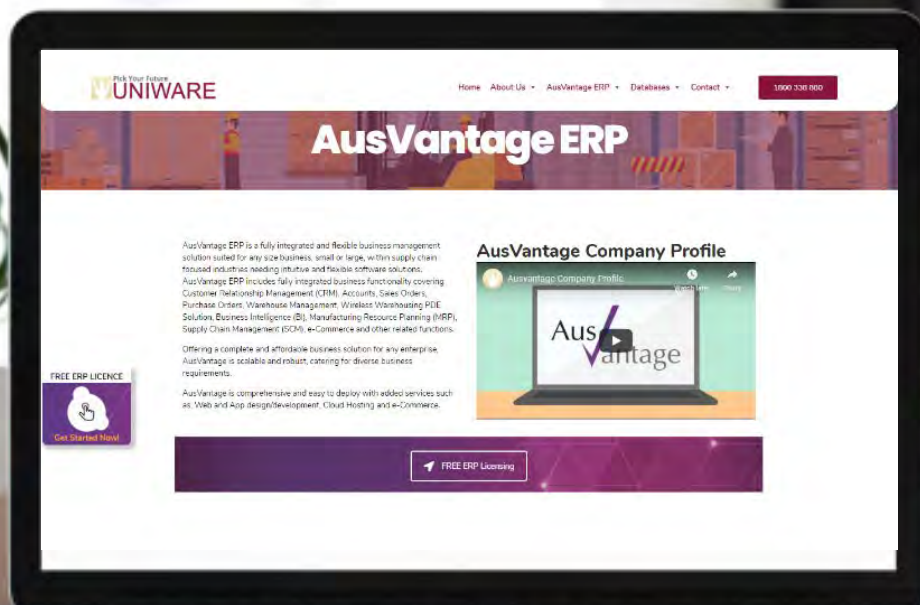

FUNCTIONALITY

ERP SOLUTIONS | DATABASES | UNIWARE CLOUD | SERVICES

Uniware provides SMEs in the Supply Chain, Manufacturing and Services sectors with ERP solutions to manage business processes.

With added value services such as IT infrastructure, Web Services and e-Commerce, Uniware is an end-to-end IT source satisfying our client's needs to enhance enterprise productivity, mitigate commercial risk and reduce capital expenditure

Uniware Complete IT Solution Provider

With an admirable history and decades of experience in the development, implementation and support of fully integrated e-business and enterprise software solutions, Uniware is a recognised leader in the supply of commercial software to companies in Australia and New Zealand.

Our team of highly skilled industry professionals can provide your organisation with a business application that meets your specific needs and implement it in conjunction with a hardware vendor or you can take advantage of the 'Uniware Cloud' and have your business applications accessible for all your staff from any location within a highly secure and stable environment.

AusVantage is developed by Uniware as a fully integrated commercial application software package, designed to operate across a wide range of hardware platforms from all major vendors, using UNIX, Linux or Windows operating systems and utilising databases from leading suppliers such as Rocket Software and others.

Uniware provides SME's in the Supply chain, Manufacturing and Services sectors with ERP solutions to manage business processes. Whether in the Uniware Cloud or an on premise solution, we provide a total technology solution satisfying our clients needs to enhance enterprise productivity, mitigate commercial risk and reduce capital expenditure.

"The payback on our investment has been enormous...

There have been savings made at every step along the way...

It's proven just how flexible and supportive the software is... I'm delighted how far we've come in such a short time".

Managing Director
Lyppard Australia

AusVantage ERP - Enterprise Resource System

The AusVantage system from Uniware is an easy-to-use, fully integrated suite of commercial application software modules that provide an instant picture of how your business is performing. From simple accounting to all-encompassing distribution, assembly and servicing – with a range of optional modules that address such perimeter processing as asset management and more complex requirements like assembly and light manufacturing.

AusVantage provides your business with extremely high levels of post sales and service support with call monitoring and management of all service support staff, thus allowing Uniware to maintain excellent response times that exceed customer expectations.

The AusVantage system is hardware independent and operates either on premise or in the Uniware Cloud integrating seamlessly with Windows based desktop clients. Supporting RESTful web services and easy integration via a documented set of Application Programming Interfaces with other applications thus enhancing application functionality and integration of new technologies.

Additional functionality is provided with the AusVantage range of optional e-Commerce solutions which enable the use of Internet technologies to manage the supply chain for product information, pricing and order placement thus enhancing your business model, introducing cost saving efficiencies and improving customer acquisition and retention.

AusVantage enables organisations to make accurate and informed decisions to enhance business process productivity and profitability by incorporating both front and back office processes into one seamless information flow; while having integrated EDI facilities that allows businesses to respond quickly to today's competitive marketplace.

Once your businesses data has been entered into the system, it's then updated automatically and continuously, into all relevant areas of any modules providing immediate access to powerful online enquiry facilities.

AusVantage provides your business with complete file integration with financial spreadsheets and simple enquiry retrieval packages with various levels of security access thus enabling the protection of sensitive data and preventing unauthorised access.

Our complete business solution is fully integrated, affordable and scalable from the ground up to meet the immediate and long term needs of small to medium size businesses.
