

FORMS SERVICE

Uniware provides technology solutions for business processes using a variety of solutions on both SQL and noSQL databases.

Our Forms Service provides an efficient solution to eliminate the high costs of pre-printed stationary and archive your business reports by using our flexible and versatile Forms Management service, also compatible with any ERP system.

Let Uniware take care of your mission critical application within the Uniware Cloud.

Uniware Forms Service - At A Glance

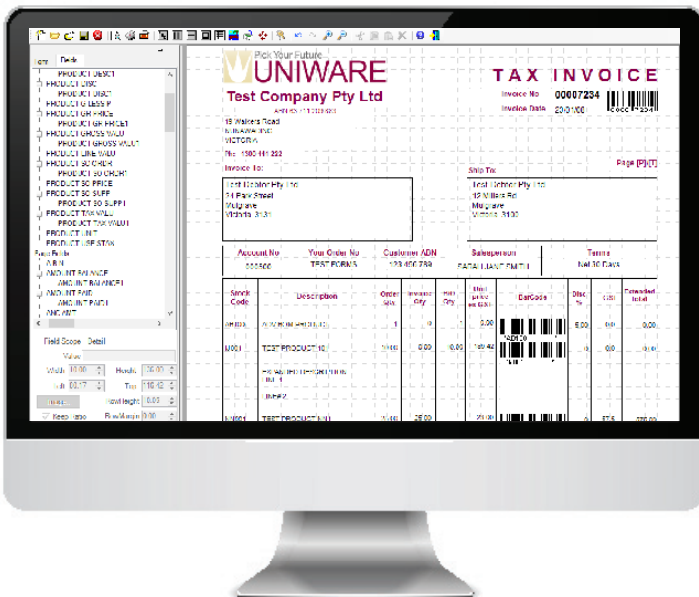

Eliminate the high costs of pre-printed stationary and archive your Distrib and AusVantage reports by using our flexible and versatile Forms Management service, also compatible with any ERP system.

Design your own forms in multiple colours, fonts and styles in addition to inserting barcodes, images and watermarks. You can choose to print, fax or email your AusVantage or Distrib documents in PDF format from your desktop. The reports are saved in PDF straight to the directory of your choice on your server.

The Uniware Forms Processing application consists of the following parts:

Uniware Forms Designer

This program allows for the creation and modification of a forms template. The forms template consists of static details such as labels, images, lines, rectangles and background images. Mapped data fields, such as the Purchase Order number or the supplier name on a Purchase Order, are added to the forms template when the form is produced. The Forms Designer allows for the mapping of these data fields to positions on the forms template.

Uniware is a complete IT solution provider offering the following:

- AusVantage ERP
- IT infrastructure
- e-Business
- Web Services
- Cloud Services
- Internet Services

Uniware subsidiary companies include Xceed and OzISP:

Xceed - A one stop web solution company providing website design and development, Content Management Systems, mobile/web apps, e-Commerce and integration services.

OzISP - Host to the Uniware Cloud platform, located at the Equinix Data Centre in Melbourne. The Uniware Cloud has been specifically configured to provide performance and reliability for mission critical MultiValue business applications.

Testimonial

“Uniware are proactive, as a customer, we are not left behind with changes in technology. I treat them as my I.T. department and talk with them like they are part of our company.”

Brian Oakley
Managing Director
Lyppard Australia

Uniware Forms Service

This program runs as a service and monitors a user defined queue for forms data.

This forms data record will contain the following details:

- The required Forms template name
- The processing method, which can be either print, fax or email
- Page Header details such as Invoice and Purchase Order Numbers
- Detail lines such as product codes, quantities and costs

Once a forms data record is found the data is added to the forms template. The resulting documents are then printed, faxed or emailed according to the specification in the text file.

Uniware Forms Administration

This allows for the initial registration of the Uniware Forms Service, defining of path names and the SMTP server details.
